CS 4300/5300 Software Engineering

Sprint 2 Requirements

1 Sprint 2 Objectives

Requirement	Points
Individually - Delivered Peer Feedback	12 pts
Project in GitHub	0 pts
Tests implemented for new features	10 pts
80% Test coverage metrics	10 pts
CI Pipeline:	
AI Code Review using OpenAI Platform (each Pull Request)	5 pts
Running automated tests (each commit)	2.5 pts
Reports test coverage metrics in console (each commit)	2.5 pts
Deployed to a production environment	10 pts
NEW:	
CD Pipeline that runs when code is merged into main	48 pts
Total	**100 pts**

2 Detailed Requirements

2.1 Individually - Delivered Peer Feedback (12 pts)

Each team member must deliver constructive peer feedback to teammates.

2.2 Project in GitHub (0 pts)

Your project must be hosted in a GitHub repository with proper structure and organization.

2.3 Tests Implemented for New Features (10 pts)

All new features developed during this sprint must have corresponding unit and/or integration tests.

2.4 80% Test Coverage Metrics (10 pts)

Your test suite must achieve at least 80% code coverage.

2.5 CI Pipeline (10 pts total)

Your continuous integration pipeline must include:

- **AI Code Review (5 pts):** Using OpenAI Platform for each Pull Request
- **Automated Tests (2.5 pts):** Running automated tests for each commit
- **Coverage Reports (2.5 pts):** Reports test coverage metrics in console for each commit

2.6 Production Deployment (10 pts)

Your application must be deployed to a production environment and accessible via URL.

2.7 NEW: CD Pipeline (48 pts)

Code must continually be deployed to production environment using GitHub Actions. When code is merged into the main branch, the CD pipeline should automatically deploy the updated application to your production environment.

See the Common Sprint Requirements document for planning, development, demo, and submission requirements.
